

MEDIA RELEASE

Proton Motor launches company newsletter in Easter week

- I Free quarterly service "The PM²" complements information offer. I
- I Historic high of the holding share "PPS" at EUR 1.53 in first quarter 2021. I
- I For the first time, 100-employee mark exceeded at the Bavarian production site. I

Puchheim near Munich, March 31, 2021 – The topic of climate and environmentally friendly hydrogen fuel cells needs modern communication standards in order to convey green technology to a broad target audience. After the re-design of their company websites at the beginning of the year with professional news desk messages as well as the social media expansion, the hightech expert Proton Motor Fuel Cell GmbH (www.proton-motor.de) and its English parent company "Proton Motor Power Systems plc" (www.protonmotor-powersystems.com) have now implemented the newsletter service "The PM²". The free format, which is released four times a year at the end of the quarter, is initially offered as a download. After a first testing phase, a registration requirement is planned. In addition, interested parties can subscribe to receive the German or English newsletter mailing on a regular basis. All that is required is an e-mail to marketing@proton-motor.de.

The new publication is Proton Motor's response to the high demand from the industry and customers for a comprehensive overview of business activities and incoming orders. In particular, investors in the "PPS" share issued by the holding company had followed up on their need for information in order to be kept up-to-date on technology developments by the hydrogen fuel cell manufacturer alongside Twitter or LinkedIn. The highlight of the 2021 starting quarter certainly includes the high of the share value on January 27 at EUR 1.53 (GBP 1.38) in correspondence to a market capitalisation of GBP 946 million. In line with the strategy roadmap of the current decade, the production site in Puchheim, not far from Munich, has made a respectable leap forward in its own development. For the first time in the company's history, more than 100 people are employed. Thanks to its commitment to the blue planet, Proton Motor has established itself as an attractive employer that inspires young engineering talents to pursue a sustainable cleantech career.

About Proton Motor Fuel Cell GmbH (www.proton-motor.de):

For more than 20 years, Proton Motor has been Germany's expert in climate-neutral energy generation with cleantech innovations and in this field, it has specialised in emission-free hydrogen fuel cells developed and manufactured in-house. The corporate focus is on stationary applications such as emergency power for critical infrastructures and mobile solutions such as back-to-base applications. In addition, the customised or standard hybrid systems are used in the automotive, maritime and rail sectors. The new automated series production plant was put into operation in September 2019.

In addition to CO₂-neutral fuel cell solutions, the internationally active technology market leader from Bavaria also offers battery-powered uninterruptible power supply (UPS) via its "SPower" product line. The company, which currently employs 100 people under the CEO management of Dr Faiz Nahab, is a wholly owned operating subsidiary of "Proton Motor Power Systems plc" (www.protonmotor-powersystems.com), based in Newcastle upon Tyne, England. Since October 2006, the parent company's "green energy" share has been listed on the London Stock Exchange with simultaneous trading in Frankfurt/Main (ticker symbol: "PPS" / WKN: A0LC22 / ISIN: GB00B140Y116).

Point of contact at Proton Motor Fuel Cell GmbH, Benzstrasse 7, D-82178 Puchheim, www.proton-motor.de:
